235 West Central Street
Natick, MA 01760

Dear Ms. Mueller:

This is in reference to your 22 September 1989 request for New Bedford "Hot Spots" data packages, as clarified by your 26 September 1989 facsimile.

Enclosed please find all of the information which we have been able to assemble on our samples numbered 1657 through 1767, inclusive (111 each), and on our samples numbered 3708 through 3710, inclusive (4 each). Please note that our contract laboratory (REVET, Worcester, MA) was not able to find the chromatograms corresponding to the 111 samples which they analyzed. Their records did record, however, the applicable retention times and areas of the quantitated peaks from the original chromatograms. We have provided the chromatograms for the four samples analyzed at our laboratory. Please note that REVET's results were reported in terms of mg/Kg of wet sample, which we later recomputed and expressed as mg/Kg of dry sample. Calculation sheets for that computation are enclosed as well.

If you have any questions concerning this transmittal, please call me at 508-928-4238.

Sincerely,

Brian J. Condikey
QA Officer
Environmental Laboratory
